

The Food Industry's  
leading Supplier  
of Innovative  
**Contract Packaging  
Solutions**

## At Peacock We Engineer: Food Safety

The food supply in the 21st century is characterized by fundamental changes, particularly at the consumer retailer interface. These changes are having a major impact on suppliers. Consumers have higher demands on food products. They want 'quality' freshness, safety, variety, convenience and a good value (quality/price relationship.)

At Peacock Engineering we maintain the highest standards when it comes to food safety by ensuring that food items are packaged according to USDA, FDA and HACCP standards. Peacock Engineering employs a variety of state-of-the-art systems and processes to keep food safe. You can trust Peacock when it comes to the safe packaging of food products.

## Processes and Systems

- Peacock's QA program includes environmental monitoring as well as pathogen checks to ensure the safe packaging of food products.
- SQF – Safe Quality Food Level 3 under the Global Food Safety Initiative
- HACCP – Hazard Analysis & Critical Control Points for all products
- Sanitary Design for control of biological (pathogen) and chemical (allergens) hazards

## Peacock Engineering Provides Traceability

- Enabling a food supply chain traceability system that identifies source components of food and packaging materials at the pallet level
- Ability to forward trace components to identify associated products
- Established procedures and systems to ensure a smooth and rapid implementation with recommended practices to aid food industry manufacturers in timely identification of component origin
- Address public safety concerns regarding the nation's ability to track and trace food products
- Provide a traceability system with the lowest possible cost and burden on the industry
- An asset to the industry as a self-sustaining system with the ability to support food safety initiatives
